

Unlock the power of seamless
cloud configuration audits
with [KloudRaksha](#)

Cutting edge SaaS solution to
revolutionize the cloud security
configuration audit landscape

About Us

We started in 2017 as [Newtons Apple Security Solutions](#) and transitioned to [Vulnuris Security Solutions LLP](#) in 2025. Since our inception, we have been dedicated to providing top-notch security solutions to its clients across the globe. At Vulnuris, we believe that every business, regardless of its size or industry, deserves the best possible protection against cyber threats.

Our product [KloudRaksha](#) is a cutting-edge, web-based cloud security assessment tool designed to simplify and accelerate security audits. By leveraging automation, real-time risk prioritization, and compliance mapping, [KloudRaksha](#) helps organizations enhance their cloud security posture with minimal manual effort.

Our platform delivers rapid audits, detailed reports, and actionable remediation steps, ensuring compliance with industry standards like CIS Benchmarks, ISO 27001, GDPR and HIPAA. With multi-cloud support and seamless integrations (coming soon), [KloudRaksha](#) empowers security teams to stay ahead of threats and maintain a robust security framework effortlessly.

Problem

- Cloud Security Assessments can be **Time-Consuming**.
- Traditional Auditing methods produce **inconsistent findings**.
- Managing **multiple compliances and industry standards** across cloud providers is challenging.
- Security teams **struggle to prioritize and address vulnerabilities** effectively.
- Audits are **difficult to manage in enterprise-scale** environments.
- Security **findings are not seamlessly incorporated** into existing workflows which **further delays the remediation**.

Solution

KloudRaksha is an automated cloud security assessment platform that delivers fast and accurate results with risk-based prioritization, compliance mapping, to streamline quick remediation.

Key Features

Fast Results with High Accuracy

Compliance Mapping

Risk-based Prioritization

Remediation Steps and Support

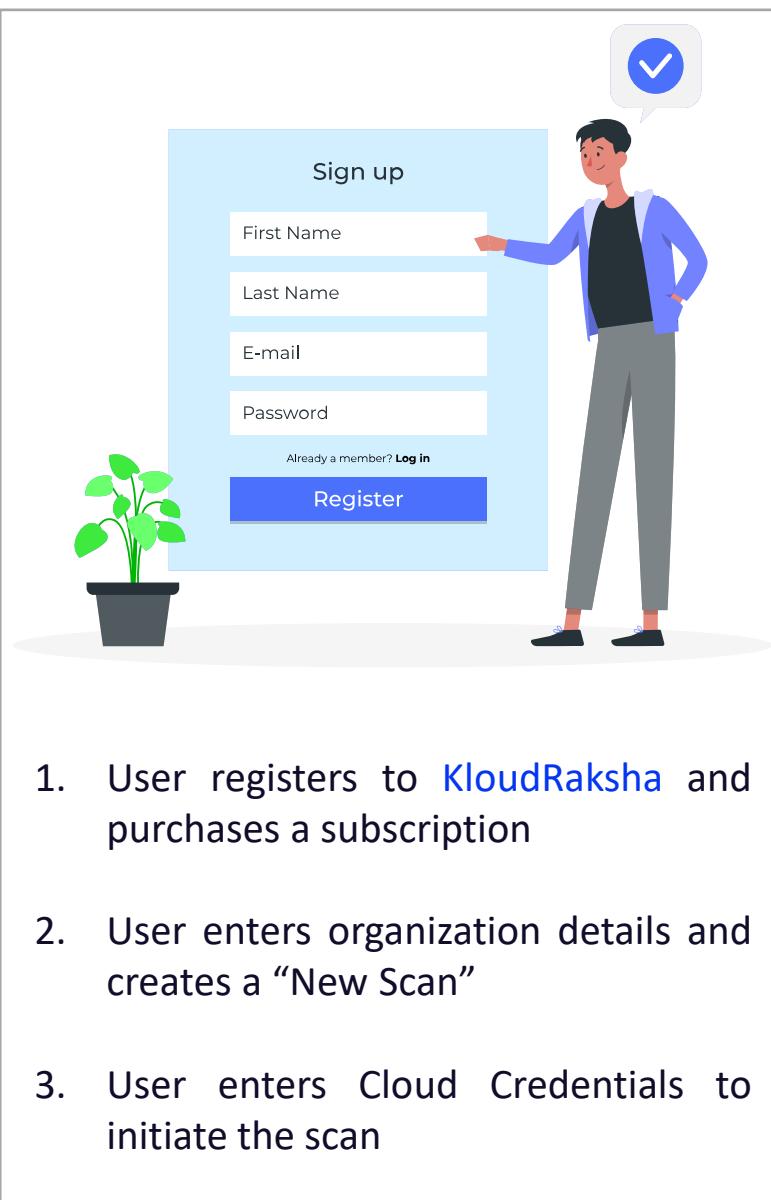

Multi-Cloud Support (AWS, Azure, GCP)

Highly Scalable

Gen AI Insights and Automated Remediation (Coming Soon)

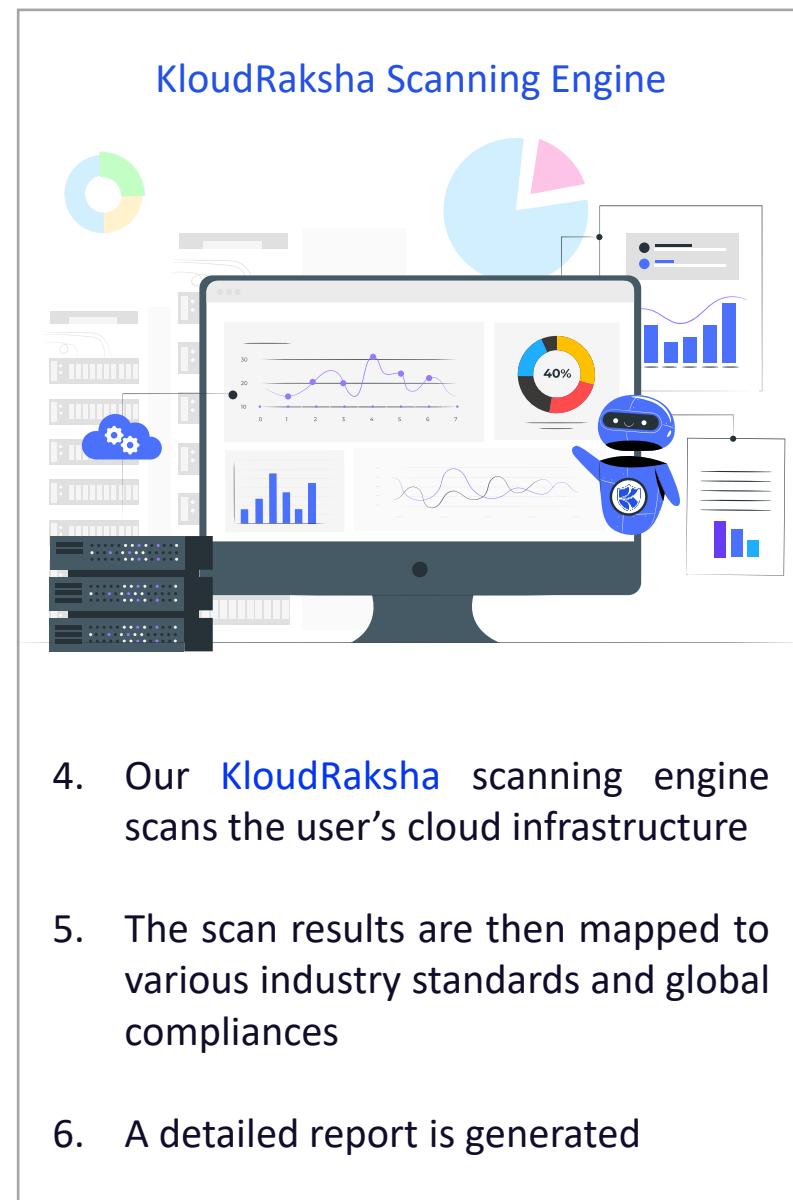

How we do it?

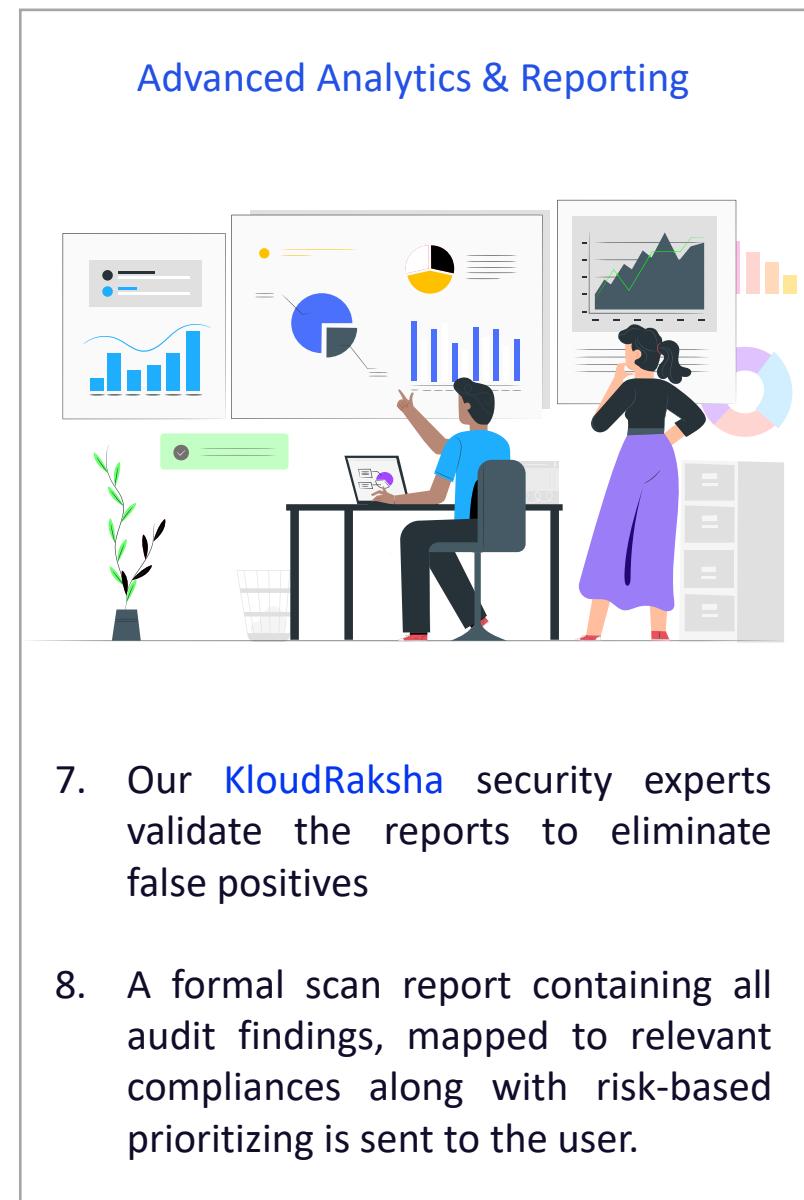

A man stands next to a light blue sign-up form. The form has fields for First Name, Last Name, E-mail, and Password, with a 'Register' button at the bottom. A speech bubble above him contains a checkmark icon. To his left is a small potted plant.

1. User registers to **KloudRaksha** and purchases a subscription
2. User enters organization details and creates a “New Scan”
3. User enters Cloud Credentials to initiate the scan

The title "KloudRaksha Scanning Engine" is at the top. Below it is a computer monitor displaying various charts and graphs, including a pie chart showing 40%, a line graph, and a bar chart. A blue robot-like character is interacting with the monitor. In the background, there are server racks and clouds with gear icons.

4. Our **KloudRaksha** scanning engine scans the user’s cloud infrastructure
5. The scan results are then mapped to various industry standards and global compliances
6. A detailed report is generated

The title "Advanced Analytics & Reporting" is at the top. On the left, a person sits at a desk with a laptop, looking at a large screen displaying charts and graphs. On the right, a woman stands next to the screen, pointing at it. There are several other charts and graphs on the wall around them.

7. Our **KloudRaksha** security experts validate the reports to eliminate false positives
8. A formal scan report containing all audit findings, mapped to relevant compliances along with risk-based prioritizing is sent to the user.
